

ABSTRACT OF THE DISCLOSURE

A toner for electrostatic image development, containing a resin binder;
and a colorant containing a charcoal powder, wherein the charcoal powder has a
5 volume-based median particle size (D_{50}) of 5.6 μm or less, and a coefficient of
variation of 80% or less; a two-component developer containing the toner and a
carrier; and a process for development of a two-component developer, including
the step of applying the two-component developer to a developing device for
two-component development. The toner can be suitably used for, for instance,
10 the development of a latent image formed in electrophotography, electrostatic
recording method, electrostatic printing method or the like.
